

# The CliniShield® INFECTION CONTROL SURVEILLANCE SOFTWARE FOR LONG - TERM CARE FACILITIES

This comprehensive program was developed based on extensive consultation with Infection Control Professionals and long-term care nursing staff.

## KEY FEATURES OF THIS PROGRAM:

- Monitors infections present in the facility on a daily basis and warns of potential outbreaks
- Produces graphs, statistics and reports without having to re-enter or re-configure existing data
- Takes less than one minute to generate reports for any period (weekly, monthly, quarterly, etc.)
- Detailed line listing reports can be presented by date, doctor, room, or by patient and include antibiotics prescribed, resolution dates and more
- Graphs with number of infections occurring per day and/or cumulative totals
- Isolates and identifies problem Infection Control areas or practices
- Involves all staff members in the Infection Control surveillance process
- Conforms with guidelines published by APIC, JCAHO and Health and Welfare Canada
- Toll-free telephone support without maintenance fees
- Fully Windows® compatible.
- Surveillance Software Stock #5 50030 01

This program significantly reduces the time spent collecting, analyzing and presenting data. On average, the time necessary to complete an Infection Control Data Collection form and enter this data into the computer is one minute per infection. Daily, monthly, quarterly or yearly reports require no further data input and may be generated in seconds.
